Electronics is the study and use of electrical devices that operate at relatively low voltages by controlling the flow of electrons or other electrically charged particles in devices such as thermionic valves and semiconductors. The pure study of such devices is considered as a branch of physics, while the design and construction of electronic circuits to solve practical problems is part of the ...

A car (or automobile) is a wheeled motor vehicle used for transportation. Most definitions of car say they run primarily on roads, seat one to eight people, have four tires, and mainly transport people rather than goods. Cars came into global use during the 20th century, and developed economies depend on them. The year 1886 is regarded as the birth year of the modern car when German inventor ...

Automotive. Automotive design engineers must optimize system efficiency, cost, and robustness in the face of changing power requirements. Traditional 12V systems are being pushed to the maximum with the electrification of previously mechanical functions -- power steering, air conditioning compressors, vacuum pumps -- as well as new start-stop systems and micro hybrid vehicles.
