Today we will discuss how to upload documents and files in Liferay. For this we will use Document and Media Portlet of Liferay. We already discuss all method in detail. Here we create a application where user can browse the documents and upload the documents and also able to download the uploaded documents.

Liferay is easy: How to Upload Documents and Files in Liferay

Document and Media Portlet in Liferay Today we will discuss Document and Media portlet of Liferay. This

portlet is very useful to store documents so that we can use these like we provide user a facility to download the files etc.

Liferay is easy: Document and Media Portlet in Liferay

Liferay can be customized using CSS, images, JavaScripts, and special templates. The first important concept when designing a theme is the portlet template. Every portlet in Liferay can be divided in two areas:

1. Portlet Content: the internal area that shows the meat of the portal. 2.

To create a Download PDF link or serve images in your portlet, you need to implement `serveResource` method in your Liferay portlet class. Here's an example on how to serve a JPG file from the server. First we need to define a link to our file, this can be done using portlet taglib `resourceURL` like this.

Download PDF or JPG from portlet - Code you need

To reference a document in the Document Library, you must first find which folder the document is contained in. Using the same use case as in 2.1.1, we see that the `W-4.pdf` document is located in the Home Page folder, as shown by the breadcrumb.
