Neuroscience of free will, a part of neurophilosophy, is the study of the interconnections between free will and neuroscience.. As it has become possible to study the human living brain, researchers have begun to watch decision making processes at work. Findings could carry implications for our sense of agency, moral responsibility, and our understanding of consciousness in general.

From the ancient Egyptian mummifications to 18th century scientific research on "globules" and neurons, there is evidence of neuroscience practice throughout the early periods of history. The early civilizations lacked adequate means to obtain knowledge about the human brain. Their assumptions about the inner workings of the mind, therefore, were not accurate.
