LOGIN or CREATE AN ACCOUNT. API provides the public with online access to nearly 200 key industry standards. These standards cover all aspects of the oil and gas industry, including refinery and chemical plant operations and equipment, offshore drilling, hydraulic fracturing and well construction, and public awareness programs.

This paper describes the new API guidelines being proposed to establish design methodology, material functional specifications, design validation requirements for equipment designed to operating above 15 000 psi (103.5 MPa) rated working pressure and/or 350°F (177°C) operating temperature through API 17 Technical Report TR8: High Pressure - High Temperature (HPHT) Design Guidelines.

1. Introduction. Wax build-up is a complex and very costly problem for the petroleum industry, widely reported and studied by researchers in decades past (Reistle, 1928, Reistle, 1932, Bilderback and McDougall, 1963, Haq, 1978). For subsea pipelines, in particular, it has become especially important to solve the issue of wax build-up, as large-scale oil production in colder regions will be ...

The natural decline in the reservoir energy will impact the flowrate of oil, gas or water, thereby creating instabilities and resulting in decreased production. Artificial lift is used in oil-dominated or liquid-loaded gas systems to increase and stabilize hydrocarbon production, as well as to minim

A pump is a device that moves fluids (liquids or gases), or sometimes slurries, by mechanical action. Pumps can be classified into three major groups according to the method they use to move the fluid: direct lift, displacement, and gravity pumps. Pumps operate by some mechanism (typically reciprocating or rotary), and

consume energy to perform mechanical work moving the fluid.
