The Internet Protocol (IP) is the principal communications protocol in the Internet protocol suite for relaying datagrams across network boundaries. Its routing function enables internetworking, and essentially establishes the Internet.. IP has the task of delivering packets from the source host to the destination host solely based on the IP addresses in the packet headers.

TCP/IP Serial Line Internet Protocol (SLIP) and Point-to-Point Protocol (PPP) The TCP/IP protocol suite is structured around the Internet Protocol (IP). IP operates at layer three of the OSI Reference Model, and assumes that it will be layered on top of an existing layer two technology. However, certain types of connections exist that do not include a layer two protocol over which IP can run.
