In physics, a field is a physical quantity, represented by a number or tensor, that has a value for each point in space and time. For example, on a weather map, the surface wind velocity is described by assigning a vector to each point on a map. Each vector represents the speed and direction of the movement of air at that point.

I am using this book as part of a physics course as an introduction to wave behavior. As a physics major at a school with a very rigorous program, I have already proven myself competent by surviving, and enjoying, my first year of physics courses.

Descrizione. La relazione che lega temperatura, pressione e volume di un gas  $\tilde{A}$  è descritta in modo semplice dalla legge dei gas. Quando il volume viene aumentato attraverso un processo irreversibile, le leggi dei gas non determinano univocamente cosa accada alla pressione ed alla temperatura del gas.
